
OBJECTIVE

Results-driven and detail-oriented Full-Stack Developer with **10.7 years of experience** in designing, developing and deploying scalable web applications using **.NET Framework, .NET Core, React, Angular JS, Python, Fast API, AKS, Docker and Microsoft Azure platform services (PAAS)**.

SUMMARY

- Overall **10+ years** of experience in building robust backend APIs with .NET, creating dynamic and responsive front-end interfaces with React and leveraging Azure Services for cloud-based solutions.
- Passionate about delivering high-quality software solutions that align with the business goals and enhance user experiences. Seeking to contribute my technical expertise and problem-solving skills to a forward-thinking organization.
- Experienced Azure developer with a strong background in full-stack development using **.NET Core and React**.
- Skilled in Designing, building, and deploying native applications on Microsoft Azure, leveraging services like **Azure App Services, Azure Functions, Azure SQL Database, Durable Functions, Azure Storage, APIM, Service Bus, Cosmos DB, Azure AD Identity to secure the APIs, Key Vault, Event Hub, Azure Security, Azure Networking and Azure DevOps for CI/CD Pipelines**.
- Experience in developing Generative AI-driven applications using **Python, Fast API, and Azure Open AI (GPT-5)** for automated document analysis and summarization.
- Strong expertise in **building scalable cloud solutions on Azure**, including **Durable Functions orchestration, Redis caching, and REST API development**.
- Strong experience in **Domain-Driven Design (DDD)**, implementing bounded contexts, aggregates, entities, value objects, and repositories.
- Extensive experience in designing cloud-native architectures using Microsoft Azure, including microservices, event-driven systems, and distributed architectures.
- Proven expertise in solution architecture including **High-Level Design (HLD), Low-Level Design (LLD)**, scalability, resiliency, and performance optimization.
- Hands-on experience with **Angular** for building enterprise-grade front-end applications with modular architecture.

CERTIFICATIONS

- AZ-204: Azure Developer Associate.
- Gen AI Internal certification.

EDUCATION

Master of Computer Applications (MCA)

JNTU, Anantapur [Affiliated].

TECHNICAL SKILLS

Backend Development

Proficient in **ASP.NET Core** for building **Restful APIs** and micro services. - Strong knowledge of **C#, ASP.NET, .NET Core**, and Entity Framework Core for database management. - Experience with **LINQ, Dependency Injection**, and **Middleware** in .NET Core. - Familiarity with few design patterns like **Singleton, Repository pattern**.

Frontend Development

Expertise in **React** for building dynamic and responsive user interfaces. Proficient in **JavaScript (ES6+), TSX, JSX**.

Have Strong basic knowledge on Angular framework.

Experience with state management libraries like **Redux** and Skilled in using UI front-end frameworks like **North Star, React bootstrap** and **Fluent-UI**.

Cloud & DevOps

Hands-on experience with Microsoft Azure services: **Azure App Services, Azure Functions, Azure SQL Database, and Azure Storage, Azure Active Directory (AAD) for authentication and authorization** etc., **Azure DevOps for CI/CD pipelines**, version control, and automated deployments. - Knowledge of containerization using **Docker**. Experience with monitoring and logging tools like **Azure Monitor** and **Application Insights**.

Database Management

Proficient in SQL Server, including query optimization and database design. - Experience with No SQL databases like **Cosmos DB**. Knowledge of ORM tools like **Entity Framework Core** for database interactions.

Generative AI

Strong experience in Python, Fast API, and REST API development for building scalable backend services and AI-powered applications. Hands-on experience with Azure OpenAI, Generative AI integration, and prompt engineering for document analysis and summarization.

AI Coding Agents

Have strong Experience on Claude, Codex, GitHub copilot, side kick, Open AI.

Version Control & Collaboration

Proficient in Azure Repo for version control. - Experience with Agile methodologies and tools like Azure Boards

Testing Tools

MOQ

Other Skills

SharePoint, O365, PowerShell, Graph API, AI GPT Models, React Redux, Azure Bots.

WORK EXPERIENCE

Senior Full Stack Developer, Deloitte USI, Hyderabad.

Project #1: *Company Communicator [January 2024- Now]*: Company Communicator is a custom Teams app that enables corporate teams to create and send messages intended for multiple teams or large number of employees over chat allowing organization to reach employees right where they collaborate.

Use this template for multiple scenarios, such as new initiative announcements, employee onboarding, modern learning and development, or organization-wide broadcasts. The app provides an easy interface for designated users to create, preview, collaborate and send messages. It's also a foundation for building custom targeted communication capabilities, such as custom telemetry on how many users acknowledged or interacted with a message.

Roles & Responsibilities -

- Involved in preparing the Design Architecture Document (DAD).
- Implemented **ASP.NET Core web APIs** to interact with the Front end.
- Involved in develop responsive and interactive user interfaces using **React (TSX)** and modern UI library.
- Worked on Azure Service bus for message queues, Azure durable functions for orchestration.
- Implemented secure authentication and authorization mechanism using Azure AD, OAuth 2.0.
- Worked on Azure storage to store adaptive card templates, key vault for storing secrets/SSL certificate.
- Implemented Redis Cache to improve the application performance.
- Documented the code, technical processes for future reference, ongoing maintenance, bug fixes and enhancements for existing application.
- Involved in preparing the Design Architecture Document (DAD) and code scans like SAST, Snyk and DAST.
- Implemented ASP.NET Core web APIs to interact with the Front end.
- Involved in develop responsive and interactive user interface using React.
- Worked on Cosmos DB to keep the data using partition keys for Audit teams, APIM, Azure Cosmos DB trigger functions.
- Worked on APIM and implemented policies to route the request to the corresponding backend web API.
- Implemented App gateway, NSG Rules, Managed/user identity etc. to secure the app.
- Implemented CI/CD pipeline for deployments.

Project#2: *Contract Insights [February 2025 – Now]*: Contract Insights is a Generative AI-powered application developed to extract key insights, summaries, and analysis from large volumes of vendor contract documents. The system stores contract files and organizes them using folder grouping and hierarchical document relationships, enabling efficient processing and retrieval of contract information. It leverages pre-configured and advanced AI prompts to analyze contracts, amendments, and addendums and produce concise vendor summaries and important contract details.

Roles & Responsibilities -

- Designed and developed **REST APIs using Python and Fast API** for contract ingestion, processing, and AI-based analysis.
- Developed user interface with **Angular 15** version to interact with Backend APIs with SSO Authentication.
- Integrated **Azure OpenAI services** to generate contract summaries, insights, and contextual analysis from large contract documents.
- Implemented **prompt engineering techniques** to extract key clauses, vendor information, and contractual insights from complex documents.
- Built **orchestration workflows using Azure Durable Functions** to manage multi-step AI processing of contract files.
- Implemented Redis caching to optimize performance and reduce repeated AI inference calls.
- Developed APIs to support **contract upload, storage, retrieval, and summarization workflows**.
- Optimized AI response latency and improved prompt effectiveness for large document processing.
- Implemented **logging, monitoring, and error handling** for AI services and backend APIs.
- Collaborated with stakeholders to translate **business requirements into AI-driven technical solutions** for contract analysis.

Project#3: *Operational and Maintenance (O&M) [July 2019 – Now]*

Roles & Responsibilities -

- Provision the SharePoint sites using CSOM, Graph and REST API via .NET Core Web API.
- Implemented backend jobs to generating the CoPilot usage, O365 group activity, OneDrive usage, Teams usage reports.
- Developed the O365 governance portal in React and .NET to recertify the MS Teams, SharePoint and O365 Group.
- Involved in setting up the environment in the Azure to deploy the services like V-NET, Gateway, NSG rules etc.
- Developed tool to migrate and archive the SharePoint sites from on-prem using C# CSOM and PowerShell scripts.
- Optimized AI response latency and improved prompt effectiveness for large document processing.
- Automated the Deployments using YAML, Classic CI/CD pipelines in Azure DevOps.

Project#3: *QR Code Generator [Jan 2021 – Sep 2023]:* A QR Code Generator project is a software application designed to convert various types of data—such as URLs, text, Business cards, contact information, cards with Teams meeting background etc. into a two-dimensional matrix barcode (QR code). These generated codes can then be scanned by mobile phone cameras to provide immediate access to information, facilitating contactless interactions, digital marketing, and data sharing.

Roles & Responsibilities -

- Designed and developed a **QR Code Generator application** to convert data such as URLs, text, contact details, and meeting information into scannable QR codes for seamless digital sharing.
- Built scalable backend APIs using **.NET Core Web API** to handle QR code generation, data processing, and storage efficiently.
- Developed an interactive and responsive frontend using **React**, enabling users to generate, customize, and download QR codes with a user-friendly interface.
- Integrated third-party or custom QR code libraries to dynamically generate high-quality QR images based on user inputs.
- Leveraged **Microsoft Azure** services for application hosting, storage, and scalability (e.g., App Services, Blob Storage, Key Vault).
- Configured CI/CD pipelines using Azure DevOps to automate build, test, and deployment processes, ensuring faster and reliable releases.
- Monitored application performance and logs using Azure monitoring tools and implemented fixes proactively.

Consultant, CapGemini, Hyderabad.

Zurich Insurance Group [Jan 2018 – Jun 2019]– Zurich is a leading multi-line insurer serving people and businesses in more than 200 countries and territories and has about 60,000 employees. Founded more than 150 years ago, Zurich is transforming insurance. In addition to providing insurance protection, Zurich is increasingly offering prevention services such as those that promote wellbeing and enhance climate resilience. Reflecting its purpose to ‘create a brighter future together,’ Zurich aspires to be one of the most responsible and impactful businesses in the world.

Roles & Responsibilities

- Design, develop and maintain web applications using C# and ASP.NET MVC.
- Implemented Server-side logic, database interactions and business logic using EF.
- Worked with front-end technologies like HTML, CSS, and JQuery.
- Worked with relation database like SQL server and optimized SQL queries, Stored Procedures and Functions.
- Worked in Agile environment, participating in sprint planning, daily stand-up.

- Worked on SharePoint as a document repository for storing documents and metadata of it.
- Worked on .NET Task scheduler jobs to archive the older documents.
- Worked on IIS to publish the website in various environments.
- Worked with third party libraries like Auto mapper, Log4net etc.

Software Engineer, Value Labs Solutions, Hyderabad.

ASTRO [Aug 2015- Jan 2018]– Astro is Malaysia’s leading content and entertainment company, serving 5.6 million homes or 72% of Malaysian TV households, 8,000 enterprises, 17.5 million weekly radio listeners across FM and digital, 14.0 million digital monthly unique visitors and 3.2 million shoppers across its TV, radio, digital and commerce platforms.

Roles & Responsibilities

- Design, develop and maintain web applications using C#, ASP.NET, SharePoint and Angular 1.x.
- Designed the web forms using bootstrap and published into SharePoint portal.
- Worked with Live API to show the broadcast information of each channel in the ASTRO portal.
- Implemented an approval process to add the program in the channel for telecast.
